

Information Technology Module

Think beyond insurance with BIZLock layered security.

- Identifies “layered” security concepts and solutions
- Access to technology vendors, partners and solutions
- Access to free/discounted solutions
- Information technology education
- Use of technology solutions for business and/or home

“As an added bonus, I received free (computer) keyboard encryption software that I love. Now, I won’t go online without it.”

— Robert C. GigLink.net,
Silicon Valley

Every program includes Risk Management tools tailored for Small Business. Layered security conceptually places you and your data assets at the “Core” of your business. What remains essential is that you build various defenses to protect the Core.

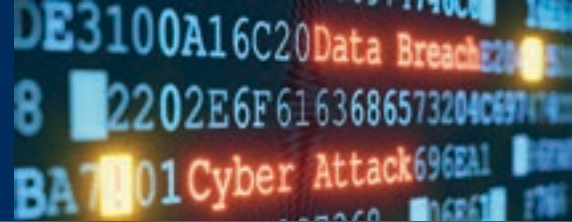

While **BIZLock** provides comprehensive solutions to help protect your Core (i.e. Education, insurance...), the **Information Technology Module** focuses on information security technologies that can help support different aspects of your business. Focus areas include:

- Data Identification, Classification
- Data Backup
- Data & Keystroke Encryption
- Network Security / Firewalls
- Anti-Malware (Virus, Spyware...) Software
- Vulnerability Scans
- System Maintenance

Increasingly, privacy and security laws are mandating the use of technologies to protect sensitive customer data. When you incorporate appropriate technology to mitigate your own risks, you will likely also become compliant with regulations governing your business/industry.

Be sure to seek the support of an I.T. professional. If you do not have a good resource, you may contact us for our fee based support and/or access to our network of local professionals.

Information Technology Module

Technology solutions with your Small Business in mind.

Small businesses face an array of cyber security challenges. In an effort to tailor our program to varying degrees of business needs, our technology solutions are made available based on your desired limit of insurance. For example:

BIZLock 50 – \$50,000 Limit of Cyber Liability Insurance

- Access to top providers of free anti-malware and encryption solutions.

BIZLock 100 – \$100,000 Limit of Cyber Liability Insurance

- Adds **Keystroke Encryption Software** that helps protect your identity and sensitive activities by encrypting your keystrokes and hiding them from hackers, malware and key loggers intent on stealing your sensitive credentials while using the internet.

BIZLock 250 – \$250,000 Limit of Cyber Liability Insurance

- Adds access to **Computer Vulnerability Scans** that help you to identify vulnerabilities before hackers do. By accessing the cloud, you can scan your computer from anywhere, anytime.

BIZLock 500 – \$500,000 Limit of Cyber Liability Insurance

- Adds **Mobile Device Security App** that provides three scan verticals together to locate, lock and wipe in case devices are lost/stolen to help prevent a data breach before its to late.
- **Mobile Vulnerability scanning** detects vulnerabilities found in installed operating system versions and applications installed on the device
- **Configuration Scanning** discovers common security issues related to device configuration such as jail broken or rooted devices, weak passwords, network vulnerabilities
- **Data Discovery Scanning** (Pan Scanning) Scans device contacts, local storage, SD cards, SMS for PAN (Primary Account Number), unencrypted cardholder data to help eliminate the risk of a data breach.

BIZLock 1000 – \$1,000,000 Limit of Cyber Liability Insurance

- Adds **Cyber Edge Risk Tool** which includes advanced information security and compliance education, together with access to the Cyber Edge Mobile App (iOS and Android) and discounts on Risk Analytic's AutoShun® crime fighting technology (enabling you to "shun" or avoid exposures)
- Access to **E-Risk Hub** as sponsored by AIG, providing tools, policies, procedures, risk assessments and more...
